PROJECT PORTFOLIO

RAHMAT SIGIT HIDAYAT

DATA ENTHUSIAST

A dedicated Data Enthusiast with a strong foundation in data analysis, machine learning, and data visualization. Proficient in tools such as Python (Pandas, NumPy, Seaborn, Matplotlib), SQL, Google Colab, Tableau, and MySQL to transform raw data into meaningful insights and actionable reports. Known for strong problem-solving, communication, and leadership skills, with a passion for collaborating in teams to address real-world challenges through data-driven solutions. Committed to continuous learning and professional growth in the field of data science.

MOTIVATION

A background in Data Science from Telkom University serves as the foundation of my journey, enriched by personal interests in writing, design, and storytelling. These creative pursuits provide a unique lens through which I approach data analysis and presentation, helping me see patterns, context, and meaning beyond the numbers. The combination of technical and creative skill sets allows for the development of more engaging and accessible data insights. This blended perspective not only improves the way I communicate findings but also strengthens critical thinking and problem-solving—key elements in the data science field. At the core of my motivation is a desire to bridge the gap between raw data and human understanding, using creativity to bring clarity and impact to data-driven solutions.

Sentiment and Social Network Analysis of Popular Tourist Destinations in Malang City

DATA

A final undergraduate thesis project combining graph theory with natural language processing (NLP) to analyze public perceptions and connectivity of tourist destinations in Malang. Collected user review data from TripAdvisor via third-party scraping tools (Apify). Conducted sentiment analysis using Python, employing SVM and text processing techniques, alongside social network analysis using NetworkX and Gephi. Both analyses were integrated to gain deeper insights into visitor sentiment and the relational structure between destinations.

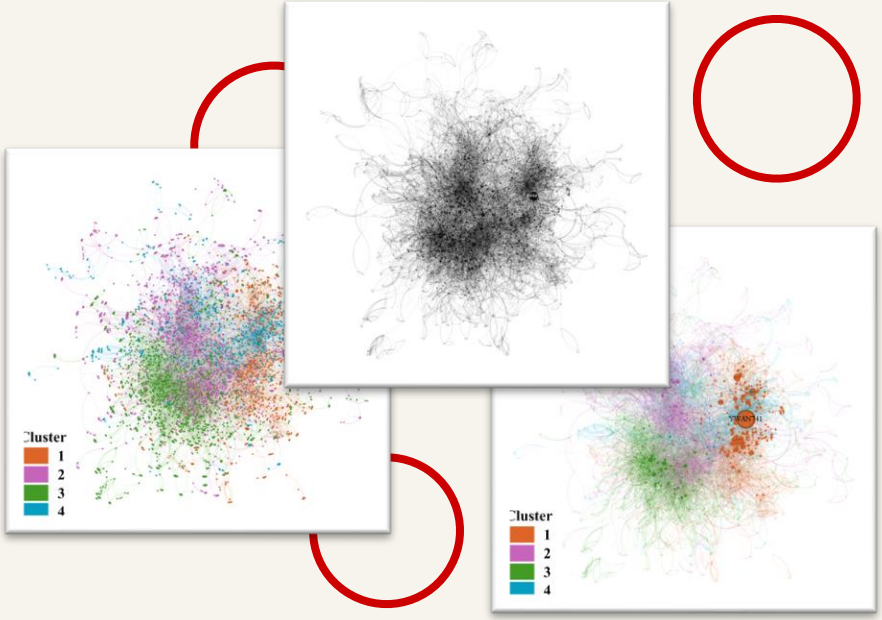
Citation Network Analysis in Scientific Research at Private University



Completed as part of a Social Media Analysis course project, this research focused on analyzing collaboration networks among researchers at a private university. Took the lead in data collection through web scraping, processed and cleaned the data using Python, and visualized the citation network using Gephi. Initially submitted as an academic paper, the project was later accepted for presentation at the 2025 International Conference on Data Science and Analytics (ICoDSA), with first-author credit

DATA

Dashboard for Location Segmentation in New Student Admission Promotion

Collaborated on a faculty-led research project focused on clustering prospective students to support promotional strategies for university admissions. Contributed to data cleaning and developed an interactive dashboard using Tableau to visualize clustering results and uncover key characteristics of each segment. The project spanned several months, with key outcomes including an Intellectual Property (HKI) registration for the dashboard and the publication of a scientific article.

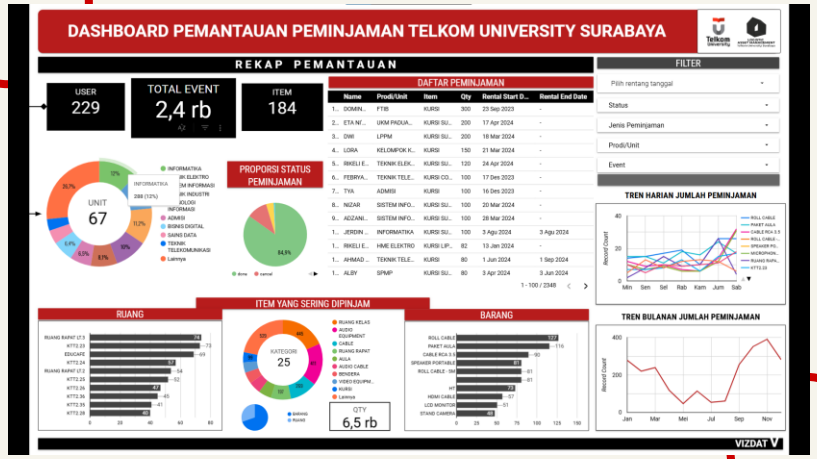
Other dashboard projects

Developed an Asset Monitoring Dashboard for the Logistic Asset Management Unit at Telkom University Surabaya



As part of a data visualization course project in collaboration with the university's Logistic Asset Management Unit, I designed and built a dashboard using Looker Studio to address real-world asset management issues—specifically, asset loan monitoring. The dashboard enables more efficient tracking and oversight of loaned assets, supporting better decision-making and operational transparency.

Strategies Analysis for (UMKM) Enterprises in Improving the Economy in East Java

DATA

Participated in the East Java Data Hackathon 2022, a three-day competition to collaboratively solve a real-world case study through data analysis and visualization. My role involved problem decomposition, assistance in exploratory data analysis, ensuring an effective and visually appealing representation of our findings and solutions. The outcome was an infographic created by extracting information from government data on (UMKM) enterprises in East Java, with subsequent suggestions provided for stakeholders and entrepreneurs based on our findings.

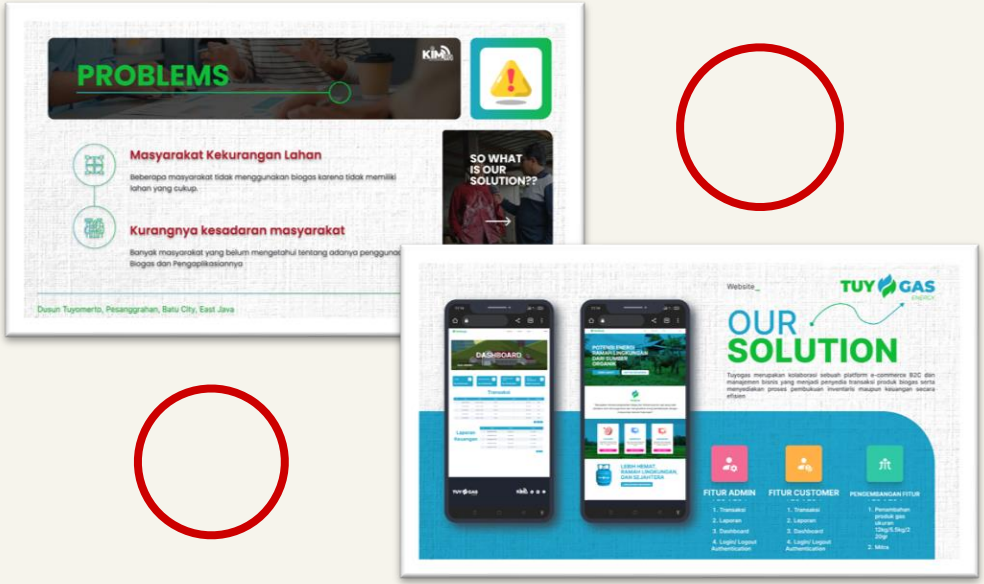
Business Case for the Development of a Website for the KIM Mayangsari Community in the Utilization of Biogas in the Tuyomerto Village of Batu City



Participated in the East Java KIM Hackathon 2023, a three-day competition collaborating with KIM to address a real-world case study. As the project manager, I coordinated the team, managed project execution, and delivered the final presentation. The outcome was a website addressing KIM's biogas-related challenge.

Warehouse Design for Supporting ITTelkom Surabaya Academic System

DATA

Creating a data warehouse for the Academic Unit at Institut Teknologi Telkom Surabaya, using tools like Tableau, MySQL, Pentaho, and ERD+. My role involved transforming datasets into a relational database, crafting schemas, and developing visualizations through dashboards. The goal was to streamline academic processes, improve efficiency, and provide insights for decision-making in curriculum planning and educational research. This initiative simplified access to academic data, making decision-making quicker and easier.

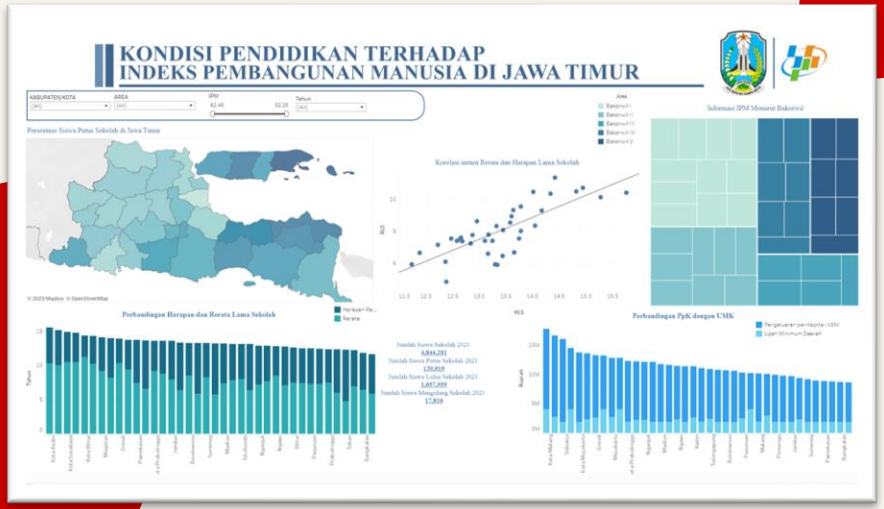
The Education Impact on Human Development Index in East Java



The project, undertaken for the fulfillment of course graduation requirements, focused on applying Exploratory Data Analysis (EDA) to government educational data. The resulting outcome was visualized and presented through Tableau dashboards. These dashboards revealed insights into the educational inequality in East Java, paving the way for informed recommendations to address the identified issues.

DATA

Analysis of Customer Behavior in the Property Business

The project, undertaken for the fulfillment of course graduation requirements, centered around applying data wrangling skills to a provided dataset. Seeking structured and purposeful information related to the dataset's theme. Contributed to crafting a clear and impactful outcome—an infographic that effectively communicated insights derived from the dataset.
